Experience

Sanofi Toronto, ON

Product Analyst, AI & Automation Sep 2025–Present

- Led development of SupRM Intelligence, an AI assistant for supplier relationship management that recorded 80 production users and 572 conversations in its first six months.
- Implemented document-upload and email-intake workflows with text extraction and version handling, enabling the agent to retrieve information from the latest indexed documents.
- Developed agent-driven document generation for supplier summaries and business-review presentations, delivering downloadable PDF and PowerPoint outputs from enterprise information.
- Established AI evaluation and production monitoring using business scenarios, human-reviewed conversations and operational checks to identify defects and guide product improvements.
- Designed document-to-action workflows with ownership resolution and human approval, keeping proposed actions reviewable before they become operational records.

Digital Strategy and Operations Intern Sep 2024–Aug 2025

- Drove License Patrol's application and contract workflow redesign, using AI-assisted classification and onboarding automation to directly contribute to €15M+ in program-level cost avoidance.
- Owned product requirements for central application and contract hubs, coordinating implementation with developers, Procurement, Finance and application owners.
- Developed savings-capture processes and benefit-calculation logic, alongside dashboards and documentation to support software-optimization decisions and ongoing operations.
- Facilitated 5+ product demos and feedback sessions, translating stakeholder feedback into product iterations, launch readiness and adoption improvements.

Authentic Learning Lab, University of Toronto Remote

Project Development Lead May 2024–Aug 2024

- Coordinated a cross-functional team of 5+ to design The Game of Social Life, a learning simulation showcased at the 2025 Human Flourishing symposium.
- Created an accessible HTML/CSS/JavaScript interface and conducted user studies to refine game mechanics and improve usability.

Education

University of Toronto October 2026
